

GWS Zero Instruction Manual Issue

There is a point of possible confusion we want to clear up concerning Step #9 of the Fuselage Assembly section on page D5 of the GWS Zero Manual.

PLEASE NOTE: Figure 12 shows a close up picture of plastic part C6 and the hex nut for mounting the wing. The picture might lead the impression that you slide C6/nut into the slot in the fuselage as it is shown in the close-up in Figure 12. The nut needs to actually face the top of the fuselage so it would need to slide into the slot opposite of Figure 12.

The slot is cut out properly and shaped to accept C6/nut correctly, but just to be sure we wanted to make you aware of the possibility for confusion. The consumer will need to glue it into the slot and it will not be a tight fit, so they will want to make sure it is in there straight before the glue sets.
